

# WHITEPAPER

## What is SafeWin?

SafeWin is a BEP20 utility token, created specifically for the SafeWin app (an ecosystem where token holders are engaging in competitions, live draws, crypto and NFT giveaways). We pride ourselves in being unique by giving token holders the opportunity to win billions of tokens in our weekly giveaway event. SafeWin is programmed to reward its holders while increasing both liquidity and value. Every transaction tax charges a fee of 8% and this is equally redistributed between holders and the liquidity pool. The more you hold...the more you earn! The purpose of this is to provide incentives to investors for holding and to punish the market manipulators. We value the safety of our community funds above everything else. Therefore, we took the extra steps to ensure SafeWin is 100% safe and by doing so we burned 40% of the total supply following launch.

4% Marketing Wallet: (0x8e0ffaf314a7a0bfad0a2f5d4641a26167ba9f66).

3% Dev Wallet: (0xe0c0b8f50405948f18f783b41ff3b13f5500b7cf).

\*On 09.06.2021 we decided to burn 2% of the Giveaway Wallet, as we believe 4% of the total supply is enough to cover our generous giveaways for the long term. Having burns controlled by the SafeWin team helps to keep the community rewarded. The conditions of the manual burn and amounts will always be advertised and tracked.

\*On 19.06.2021 we ran a maintenance action to decrease the amount of tokens from the LP tax accumulated to the contract address. The automatic liquidity process being refreshed, large amounts of tokens were sent to the PancakeSwap LP. To avoid a big price impact caused by the automatic selling, the dev wallet removed those tokens from LP and bought back in. All the tokens left from the process were burned (sent to the dead wallet).

## SafeWin Protocol

Our focus throughout the SafeWin journey is to create absolute transparency and generate full clarity for investors to know that what they are trading is safe and secure. Our team is always working on SafeWin social media platforms alongside our community who can guarantee its success. Through Telegram, Facebook, Instagram, Twitter, Reddit and other social media channels, team SafeWin are creating a community which can go beyond the moon.

## SafeWin App

At SafeWin we aim to build on the market position as a leading blockchain community-rewards platform, through the consistent introduction of high-quality decentralized applications (DApps). This will be accomplished by leveraging the SafeWin team's experience and by enabling other development teams and users to guide the growth and direction of the platform through a unique governance mechanism. In contrast with more centralized competition-rewards platforms, the BEP-20 based platform SafeWin provides a unique and compelling user experience. No...forget about the moon! SafeWin plans on moving into another dimension.

The SafeWin.app development deadline is set for September 2021.
